Maverick

AI-powered promotional coupon engine generating hyper-personalised offers for casino players.

Overview

- Maverick is a personalised incentive generation platform for gaming and casinos. It analyses player behaviour, spending history, game preferences, and visit frequency to craft hyper-personalised promotional offers (e.g., free spins, dining credits, VIP upgrades).
- AI replaces static promotions with dynamic campaigns that adapt in real time to maximise engagement and lifetime value.

Key features

Player segmentation

Segments players by lifetime value, churn risk, and play patterns.

Automated coupon generation

Generates coupons with configurable reward rules and expiry logic.

02

Banking

Data Processing

TRBank

Intelligent document processing to transform unstructured banking documents into validated structured data.

Overview

- It ingests unstructured documents (statements, loan applications, KYC forms, remittance slips, correspondence) and converts them into clean, validated structured datasets for analytics, compliance reporting, and core banking ingestion.

Key features

Multi-format ingestion

Supports PDFs, scanned images, and handwritten forms.

Entity extraction

Extracts account numbers, dates, transaction amounts, and counterparties.

03

ESG

Emission Analytics

Sustainability

End-to-end ESG intelligence platform for Scope 1–3 carbon accounting and audit-ready reporting.

Overview

- Sustainability is an end-to-end ESG intelligence tool for managing environmental footprint. It ingests utility bills, fuel logs, travel records, and supply chain data to calculate Scope 1, 2, and 3 emissions.
- It generates audit-ready ESG reports aligned to GHG Protocol and GRI, and supports predictive analytics and scenario modelling for net-zero planning.

Key features

Automated bill parsing

Parses utility bills and maps to relevant emission factors.

Scope 1–3 carbon accounting

Calculates emissions aligned with the GHG Protocol.

Ecovision

Computer-vision sustainability auditing that turns CCTV into continuous compliance monitoring.

Overview

- Ecovision transforms facility CCTV into an active sustainability compliance system. It analyses live and recorded video to detect energy waste, improper waste disposal, safety non-compliance, and resource misuse.
- Events are logged with clips, timestamps, severity ratings, and AI-generated corrective action recommendations.

Key features

Real-time video compliance data

Automated incident logging

Monitors facilities for sustainability and compliance events continuously.

Creates incident records with clip extraction and severity classification.

Hotel Concierge

Conversational AI avatar that manages hotel bookings and amenity reservations end-to-end.

Overview

- Hotel Concierge is a conversational AI agent with a lifelike avatar interface for bookings and guest services.
- Guests use natural language to search rooms, check availability, book, modify or cancel, and reserve amenities (dining, spa, leisure).
- The agent maintains multi-turn context and integrates with PMS and channel managers for real-time pricing and availability.

Key features

End-to-end booking flows

Room search, booking, modification, and cancellation in natural language.

Amenity reservations

Books dining, spa, pool, gym, and activities with unified context.

VetAI

AI recruitment platform running live video interviews with structured scoring and integrity checks.

Overview

- VetAI automates candidate screening from job posting to hiring decision.
- It conducts AI-powered live video interviews, evaluates responses on communication, technical accuracy, and behavioural competencies, and produces structured recruiter reports.
- Proctoring and silence detection support interview integrity, and role templates enable rapid configuration across job titles.

Key features

AI-led video interviews

Conducts dynamic interviews with contextual follow-up questions.

Integrity & proctoring

Anomaly detection, proctoring controls, and integrity scoring.

07

L&D

Communication AI

Resonance

AI communication coach that analyses speech and provides actionable feedback and progress tracking.

Overview

- Resonance is an AI-powered communication coaching platform for professional upskilling, assessing tone, clarity, pacing, filler words, and persuasive impact during practice and real conversations.
- Personalised feedback and structured exercises drive habit-building, with progress visualised over time.

Key features

Real-time speech analysis

Analyses tone, pace, clarity, and filler word frequency.

Actionable AI feedback

Generates specific improvement suggestions and coaching reports.

Orbit

Internal project and ticket tracking system providing real-time delivery visibility across engagements.

Overview

- Orbit is Systech’s internal project management and ticket tracking platform. It centralises task creation, assignment, status tracking, and milestone management across projects.
- Built to replace spreadsheets and email threads, it provides leadership with a real-time operational view of delivery health, resourcing, and sprint progress.
- and client engagements.

Key features

Project & sprint planning

Create projects/sprints with milestones, deadlines, and priorities.

Ticket lifecycle management

Manage tickets from backlog to completion sign-off.

SysRank

Proprietary technical assessment platform for objective screening and internal skill benchmarking.

Overview

- SysRank is Systech’s internal equivalent of HackerRank for evaluating technical talent via coding challenges, SQL assessments, data engineering problems, and timed sets. It supports candidate screening and internal benchmarking. Question banks are managed by domain, difficulty, and technology track, with dashboards for results and skill heatmaps.

Key features

Timed assessments

Challenges across Python, SQL, and data engineering tracks.

Auto-grading

Auto-graded test cases with partial scoring and detailed breakdowns.

10

Aviation

RAG · Conversational AI

AeroIntel

RAG-powered assistant helping airport CCR technicians retrieve procedures, manuals, and fault history fast.

Overview

- AeroIntel is a retrieval-augmented generation assistant for airport Common Communication Room (CCR) technicians.
- It enables natural language queries over a hybrid knowledge base combining structured operational databases and unstructured technical documents.
- Engineers can instantly surface maintenance procedures, manuals, fault histories, and protocols during live incidents.

Key features

Hybrid RAG knowledge base

Combines structured database search with document retrieval.

Conversational interface

Context-aware, multi-turn natural language querying.

SysMart

Databricks-powered retail chatbot combining live SQL querying and RAG with Freshchat deployment.

Overview

- SysMart is a conversational AI platform for retail operations built on Databricks AI serving endpoints. It combines live SQL database querying with RAG
- over product catalogues, return policies, and FAQs to answer customer and internal operations questions.
- Freshchat integration enables deployment into existing support channels with escalation to humans.

Key features

Live database Q&A

Natural language queries against inventory and order management databases.

RAG over retail knowledge

Retrieves from catalogues, return policies, and operational FAQs.

Intelliframe

Generates annotated dashboard and app wireframes from natural language briefs or data schemas.

Overview

- Product managers and analysts describe metrics, user journeys, and layout preferences, and the tool Intelliframe generates annotated dashboard and application wireframes from natural language briefs or data schemas.
- produces structured mockups with component annotations, layout logic, and data binding
 - suggestions for developer handoff, with iterative refinement via prompts.

Key features

Natural language to wireframe

Creates wireframes for dashboards, apps, and portals from text briefs.

Schema-aware layouts

Suggests layouts based on underlying data models and entities.

13

Security

Vision Analytics

AiCCTV

AI surveillance analytics turning camera feeds into real-time alerts with evidence and reporting.

Overview

- AiCCTV transforms passive surveillance into a security intelligence layer. It processes live and recorded camera feeds to detect anomalies, unauthorised access, crowd density violations, safety hazards, and behavioural patterns of concern.
- It generates real-time alerts with video clip evidence and incident metadata, plus historical analytics for compliance reporting.

Key features

Real-time anomaly detection

Detects intrusion and anomalies across multiple simultaneous camera feeds.

Crowd & access monitoring

Crowd density and zone-based restricted access alerting.

14

Data Engineering

AI Tooling

DataOne

Unified AI data engineering toolkit bridging Fabric, Snowflake, and Databricks via MCP servers.

Overview

- Using purpose-built MCP (Model Context Protocol) servers, it exposes platform capabilities to AI agents and workflows for natural language pipeline creation, schema exploration, query execution, lineage, and data asset management without switching consoles or writing boilerplate integrations.
- Fabric, Snowflake, and Databricks through a single intelligent interface.
 - data asset management without switching consoles or writing boilerplate integrations.

Key features

MCP server connectors

Purpose-built MCP servers for Fabric, Snowflake, and Databricks.

Natural language pipelines

Creates and orchestrates transformations using language-driven commands.

15

Food and Beverage

AI Avatar

Chef

Lifelike AI video avatar delivering personalised menu guidance, cooking walkthroughs, and ordering.

Overview

- Chef is an AI video avatar for food and beverage experiences.
- A lifelike presenter provides personalised menu recommendations, ingredient explanations, allergen guidance, and step-by-step cooking walkthroughs via natural language conversation.
- It blends content with commerce through POS and e-commerce integrations for in-conversation ordering.

Key features

Conversational video avatar

Lifelike AI presenter with context-aware natural conversation.

Personalised recommendations

Suggests dishes based on preferences and dietary restrictions.
