Maverick

Casino · AI Generation

AI-Powered Promotional Coupon Engine for Casino Players

Coverage: Full

Status: Live

Version: v1.0

Overview

Maverick is a personalised incentive generation platform built for the gaming and casino industry. It analyses player behaviour, spending history, game preferences, and visit frequency to craft hyper-personalised promotional offers ? from free spins and dining credits to VIP room upgrades. Powered by AI, Maverick replaces static promotions with dynamic, data-driven campaigns that adapt in real time.

Impact

Increases promotional ROI and player retention by delivering the right offer to the right player at the right moment, replacing guesswork with precision targeting.

Key Features

Player Segmentation

- Segments players based on lifetime value, churn risk, and play patterns.

Automated Coupon Generation

- Generates coupons with configurable reward rules and expiry logic.

Real-Time Offer Delivery

- Delivers offers via SMS, app notifications, and kiosk displays.

Campaign Analytics & A/B Testing

- Tracks performance and supports A/B testing to optimise campaigns.

POS & Loyalty Integrations

- Integrates with casino POS and loyalty management systems.

TRBank

Banking · Data Processing

?

Unstructured-to-Structured Data Transformation for Banking

Coverage: Full

Status: Live

Version: v1.0

Overview

TRBank is an intelligent document processing platform designed for financial institutions. It ingests unstructured banking documents ? account statements, loan applications, KYC forms, remittance slips, and free-text correspondence ? and transforms them into clean, validated, structured datasets ready for downstream analytics, compliance reporting, and core banking system ingestion.

Impact

Eliminates manual data entry for banking operations teams, reducing document processing time from hours to minutes per batch while improving accuracy and compliance readiness.

Key Features

Multi-Format Document Ingestion

- Ingests PDFs, scanned images, and handwritten forms.

Entity Extraction

- Extracts key entities including account numbers, dates, transaction amounts, and counterparties.

Validation Rules Engine

- Flags anomalies, duplicates, and missing fields via configurable validation rules.

Structured Outputs

- Outputs structured data in JSON, CSV, and direct database write formats.

Audit Trail & Confidence Scoring

- Provides an audit trail and confidence scoring for every extracted data field.

Sustainability

ESG · Emission Analytics

?

Full-Cycle ESG Intelligence and Emission Calculation Platform

Coverage: Full

Status: Live

Version: v1.0

Overview

The Sustainability platform is an end-to-end ESG intelligence tool for organisations managing their environmental footprint. It ingests utility bills, fuel logs, travel records, and supply chain data to calculate carbon emissions across Scope 1, 2, and 3 categories. The platform generates audit-ready ESG reports aligned with GHG Protocol and GRI standards, and provides predictive analytics to model emission reduction scenarios for net-zero planning.

Impact

Reduces ESG reporting effort from weeks of manual spreadsheet work to automated, audit-ready output generated in minutes ? enabling organisations to meet sustainability reporting obligations with confidence.

Key Features

Utility Bill Parsing

- Automatically parses utility bills with intelligent emission factor mapping.

Scope 1–3 Carbon Accounting

- Calculates Scope 1, 2, and 3 emissions aligned with the GHG Protocol.

AI-Generated ESG Narratives

- Produces narrative ESG reports ready for board and regulatory submission.

Benchmarking & Target-Gap Dashboards

- Provides peer benchmarking and target-gap analysis dashboards.

Scenario Modelling

- Supports net-zero and reduction roadmap scenario modelling.

Ecovision

ESG · Vision AI

Video-Powered AI Auditing for Sustainability Compliance

Coverage: Full

Status: Live

Version: v1.0

Overview

Ecovision brings computer vision into the sustainability space, transforming passive CCTV infrastructure into an active compliance monitoring system. It continuously analyses live and recorded facility video feeds to detect energy waste, improper waste disposal, safety non-compliance, and resource misuse. Each detected event is logged with an extracted video clip, timestamp, severity rating, and an AI-generated corrective action recommendation.

Impact

Transforms sustainability auditing from periodic manual walkthroughs into a continuous, automated, evidence-driven compliance function ? providing an always-on audit trail for regulators and internal teams.

Key Features

Real-Time Facility Video Analysis

Analyses live and recorded feeds for sustainability and compliance events across facilities.

Automated Incident Logging

Logs incidents with clip extraction and severity classification.

Corrective Action Recommendations

Generates AI-driven corrective action recommendations per detected incident.

Compliance Scoring Dashboard

Provides compliance scoring with historical trend analytics.

ESG Platform Integration

Natively integrates with the Sustainability platform for unified ESG reporting.

Hotel Concierge

Hospitality · AI Agent

?

AI Avatar Booking Agent for Hotels and Guest Amenities

Coverage: Full

Status: Live

Version: v1.0

Overview

Hotel Concierge is a conversational AI agent that handles end-to-end hotel booking and guest services through a lifelike AI avatar interface. Guests interact in natural language to search rooms, check availability, make bookings, and reserve amenities including dining, spa, and leisure activities. The agent maintains conversational context across multi-turn interactions and orchestrates reservations through backend hotel PMS integrations.

Impact

Reduces front-desk workload and call centre volumes while increasing ancillary revenue by enabling 24/7 self-service booking through an engaging, human-like AI interface.

Key Features

Room Booking & Changes

Supports natural language booking, modification, and cancellation.

Amenity Reservations

Reserves dining, spa, pool, gym, and activities.

Conversational Memory

Maintains multi-turn context and tracks guest preferences.

AI Avatar Interface

Provides a lifelike avatar for an immersive, personalised experience.

PMS & Channel Manager Integration

Connects to PMS/channel managers for real-time availability and pricing.

VetAI

HR Tech · AI Screening

End-to-End AI-Powered Candidate Screening and Interview Platform

Time-to-screen reduction: Up to 70%

Coverage: Full

Status: Live

Overview

VetAI is a full-stack AI recruitment platform that automates the candidate screening process from job posting through to hiring decision. It conducts live AI-powered video interviews, evaluates responses across communication quality, technical accuracy, and behavioural competencies in real time, and delivers structured hiring reports to recruiters. Video proctoring and silence detection ensure interview integrity.

Impact

Cuts time-to-screen by up to 70%, enabling recruiters to focus on final-stage evaluation while AI handles initial assessment at scale ? consistently and without bias.

Key Features

AI-Conducted Video Interviews

- Runs live interviews with dynamic, contextual follow-up questioning.

Proctoring & Integrity Scoring

- Detects anomalies and scores interview integrity via video proctoring.

Multi-Dimensional Evaluation

- Evaluates technical, behavioural, and communication performance.

Structured Hiring Reports

- Generates role-fit scores and candidate rankings automatically.

Pipeline Management Dashboard

- Provides candidate tracking and analytics across the full pipeline.

Resonance

L&D · Communication AI

AI Communication Coaching for Professional Upskilling

Coverage: Full

Status: Live

Version: v1.0

Overview

Resonance is an AI-powered communication coaching platform designed to help professionals develop confident, effective communication skills. Using speech analysis and LLM-based evaluation, it assesses tone, clarity, pacing, filler word usage, and persuasive impact during practice sessions and real conversations. Personalised feedback loops and structured exercises help users build lasting habits, with progress tracked over time.

Impact

Helps organisations build a culture of clear, confident communication ? reducing meeting inefficiencies and improving stakeholder engagement across teams at every level.

Key Features

Real-Time Speech Analysis

- Analyses tone, pace, clarity, and filler word frequency.

Actionable Feedback Reports

- Generates specific, actionable improvement suggestions.

Scenario-Based Practice

- Supports presentations, negotiations, and interview practice.

Progress Tracking

- Tracks skill growth and visualises progress across sessions.

Team Analytics

- Provides cohort and team-level analytics for L&D; managers.

Orbit

Internal Tool · Project Management

?

Systech's Internal Project and Ticket Tracking System

Coverage: Full

Status: Live

Version: v1.0

Overview

Orbit is Systech's purpose-built internal project management and ticket tracking platform. It centralises task creation, assignment, status tracking, and milestone management across all active projects and client engagements. Built to replace scattered spreadsheets and email threads, Orbit provides a real-time operational view of delivery health, resource allocation, and sprint progress across the organisation.

Impact

Gives Systech leadership a single source of truth for all project delivery, replacing fragmented communication channels with a structured, searchable operational hub.

Key Features

Project & Sprint Planning

- Creates projects and sprints with milestone, deadline, and priority tracking.

Ticket Lifecycle Management

- Manages tickets from backlog creation through completion sign-off.

Workload Visibility

- Assigns work and provides individual workload visibility across projects.

Search & Filtering

- Supports priority/status filtering and global search across projects.

Collaboration Feeds

- Includes per-ticket activity feeds and comment threads for async collaboration.

SysRank

Internal Tool · Technical Assessment

Systech's Proprietary Technical Assessment and Benchmarking Platform

Coverage: Full

Status: Live

Version: v1.0

Overview

SysRank is Systech's internal equivalent of HackerRank ? a proprietary platform for evaluating technical talent through structured coding challenges, SQL assessments, data engineering problems, and timed problem sets. It supports candidate screening and internal benchmarking, with question banks managed by domain, difficulty level, and technology track.

Impact

Standardises talent evaluation at Systech, ensuring consistent, objective assessment for both external hiring and internal capability development and benchmarking.

Key Features

Timed Technical Challenges

- Runs timed challenges across Python, SQL, and data engineering tracks.

Auto-Grading & Scoring

- Auto-grades test cases with partial scoring and detailed breakdowns.

Proctored Assessment Portal

- Provides a candidate-facing portal with proctoring and integrity controls.

Question Bank Management

- Organises questions by domain, difficulty, and technology.

Results & Benchmarking

- Delivers leaderboards, score history, and skill heatmaps.

AeroIntel

Aviation · RAG · Conversational AI

?

RAG-Powered AI Assistant for Airport CCR Technicians

Coverage: Full

Status: Live

Version: v1.0

Overview

AeroIntel is a retrieval-augmented generation (RAG) AI assistant built specifically for airport Common Communication Room (CCR) technicians. It enables natural language queries over a hybrid knowledge base combining structured operational databases and unstructured technical documents, surfacing maintenance procedures, equipment manuals, fault histories, and operational protocols during live incidents.

Impact

Dramatically reduces time-to-resolution for technical faults by giving CCR engineers instant access to the right information during live airport incidents ? when every minute counts.

Key Features

Hybrid RAG Architecture

- Combines structured database search with document retrieval.

Natural Language Interface

- Supports context-aware, multi-turn conversational querying.

Guided Procedure Retrieval

- Returns step-by-step maintenance procedures with guided resolution support.

Fault History Matching

- Finds similar incidents and patterns via fault history lookup.

Agentic Orchestration

- Orchestrates multi-source synthesis for complex technician queries.

SysMart

Retail · AI Chatbot

Databricks-Powered AI Chatbot for Retail Operations

Coverage: Full

Status: Live

Version: v1.0

Overview

SysMart is a conversational AI platform for retail operations, built on Databricks AI serving endpoints. It combines live SQL-based database querying with retrieval-augmented generation over product catalogues, return policies, and FAQ knowledge bases. Freshchat integration deploys the chatbot into the existing customer support channel with seamless escalation to human agents.

Impact

Reduces support ticket volume and handles routine product, order, and policy queries automatically, freeing support agents to focus on higher-value, complex customer interactions.

Key Features

Live Database Q&A

- Answers natural language questions against live inventory and order management databases.

RAG Over Knowledge Bases

- Uses RAG over product catalogues, return policies, and operational FAQs.

Freshchat Deployment

- Integrates with Freshchat for customer-facing self-service.

Human Handoff

- Supports intelligent escalation and handoff to human agents for complex queries.

Usage Analytics

- Provides analytics and query categorisation for continuous improvement.

Intelliframe

Design · Generative AI

AI Wireframe Generator for Dashboards and Data Products

Coverage: Full

Status: Live

Version: v1.0

Overview

Intelliframe accelerates the design-to-development pipeline by generating annotated dashboard and application wireframes from natural language briefs or data schemas. Users describe metrics, user journeys, and layout preferences; Intelliframe produces structured wireframe mockups with component annotations, layout logic, and data binding suggestions ready for developer handoff.

Impact

Compresses weeks of wireframing and design iteration into hours, aligning product, design, and engineering teams around a shared visual brief much faster ? reducing rework and misalignment.

Key Features

Natural Language to Wireframes

- Generates wireframes for dashboards, apps, and portals from text briefs.

Schema-Aware Suggestions

- Suggests layouts based on the underlying data model.

Annotated Components

- Adds UX rationale and interaction behaviour notes to components.

Export Formats

- Exports to image, PDF, and developer-ready specification documents.

Iterative Refinement

- Supports follow-up prompts to refine wireframes iteratively.

AiCCTV

Security · Vision Analytics

?

AI-Powered Surveillance and Vision Analytics Platform

Coverage: Full

Status: Live

Version: v1.0

Overview

AiCCTV is an intelligent video surveillance solution that transforms passive camera infrastructure into an active security intelligence layer. It processes live and recorded feeds to detect anomalies, unauthorised access, crowd density violations, safety hazards, and behavioural patterns of concern. Alerts are generated in real time with video clip evidence and incident metadata.

Impact

Enables proactive security operations at scale across large facilities ? reducing incident response time and providing evidence-backed records for compliance investigations and regulatory audits.

Key Features

Anomaly & Intrusion Detection

Detects anomalies and intrusions across multiple simultaneous camera feeds.

Crowd & Zone Monitoring

Monitors crowd density and triggers zone-based restricted access alerts.

Safety Hazard Detection

Detects falls, unattended objects, and fire indicators.

Evidence-Backed Alerts

Dispatches alerts with video clip evidence and full incident metadata.

Incident Analytics & Reporting

Provides historical incident analytics, heatmaps, and compliance reporting.

DataOne

Data Engineering · AI Tooling

Unified AI Data Engineering Toolkit Across Fabric, Snowflake and Databricks

Coverage: Full

Status: Live

Version: v1.0

Overview

DataOne is Systech's unified AI data engineering platform that bridges Microsoft Fabric, Snowflake, and Databricks under a single intelligent interface. Through purpose-built MCP (Model Context Protocol) servers, it exposes platform capabilities to AI agents and workflows ? enabling natural language pipeline creation, schema exploration, query execution, and data asset management without switching consoles or writing boilerplate integration code.

Impact

Reduces data engineering toil by giving AI agents and analysts a unified, language-driven interface across three major data platforms simultaneously ? eliminating context-switching and manual API wrangling.

Key Features

MCP Servers for Major Platforms

- Provides MCP servers purpose-built for Microsoft Fabric, Snowflake, and Databricks.

Natural Language Pipelines

- Enables natural language pipeline creation and data transformation orchestration.

Cross-Platform Exploration

- Supports schema exploration and data lineage querying across platforms.

AI Quality & Monitoring

- Integrates AI agents for automated data quality checks, monitoring, and alerting.

No-Code Orchestration Integration

- Integrates with no-code workflow automation for pipeline orchestration.

Chef

Food and Beverage · AI Avatar

?

AI-Powered Video Avatar for Food and Beverage Experiences

Coverage: Full

Status: Live

Version: v1.0

Overview

Chef is an AI video avatar application tailored for the food and beverage industry. A lifelike AI presenter delivers personalised menu recommendations, ingredient explanations, allergen guidance, and step-by-step cooking walkthroughs ? all through natural language conversation. The platform blends engaging content with commerce, enabling interactive, on-demand hosting around the clock.

Impact

Creates a differentiated, always-on digital engagement channel for F&B; brands ? combining the warmth and personalisation of a human host with the scalability and consistency of AI.

Key Features

Lifelike Video Avatar

Provides natural, context-aware conversational interaction via a lifelike AI avatar.

Personalised Recommendations

Recommends dishes and menus based on preferences and dietary restrictions.

Guided Cooking Walkthroughs

Delivers step-by-step cooking guidance with real-time Q&A.;

Allergen & Nutrition Guidance

Explains allergens, nutritional breakdowns, and ingredient substitutions.

Commerce Integrations

Integrates with POS and e-commerce for in-conversation ordering.
